REPORT REFERENCE NO.	**RC/24/5**
MEETING	**RESOURCES COMMITTEE**
DATE OF MEETING	**5 FEBRUARY 2024**
SUBJECT OF REPORT	**TREASURY MANAGEMENT PERFORMANCE 2023-24 – QUARTER 3**
LEAD OFFICER	**Director of Finance & Corporate Service (Treasurer)**
RECOMMENDATIONS	***That the performance in relation to the treasury management activities of the Authority for 2023-24 (to December 2023) be noted.***
EXECUTIVE SUMMARY	The Chartered Institute of Public Finance and Accountancy (CIPFA) issued a Code of Practice for Treasury Management. The Code suggests that members should be informed of Treasury Management activities at least twice a year, but preferably quarterly. This report therefore ensures this Authority is embracing Best Practice in accordance with CIPFA's Code of Practice.
RESOURCE IMPLICATIONS	As indicated within the report.
EQUALITY RISKS AND BENEFITS ANALYSIS	An initial assessment has not identified any equality issues emanating from this report.
APPENDICES	A. Investments held as at 31 December 2023. B. A detailed look at how the economy faired during Quarter 3 of 2023/24
BACKGROUND PAPERS	Treasury Management Strategy (including Prudential and Treasury Indicators) as approved at the meeting of the Fire & Rescue Authority held on the 15 February 2023 – Minute DSFRA/28D refers.

1. INTRODUCTION

1.1 The Treasury Management Strategy for Devon and Somerset Fire & Rescue Authority has been underpinned by the adoption of the Chartered Institute of Public Finance and Accountancy's (CIPFA) Treasury Management in Public Services Code of Practice (the Code) and the CIPFA Prudential Code. The Code recommends that members be updated on treasury management activities regularly (TMSS, annual and midyear reports). This report, therefore, ensures this Authority is implementing best practice in accordance with the Code and includes:

- The creation and maintenance of a Treasury Management Policy Statement, which sets out the policies and objectives of the Authority's treasury management activities;
- The creation and maintenance of Treasury Management Practices, which set out the manner in which the Authority will seek to achieve those policies and objectives;
- The receipt by the full Authority of an annual Treasury Management Strategy Statement - including the Annual Investment Strategy and Minimum Revenue Provision Policy - for the year ahead, a Mid-year Review Report and an Annual Report (stewardship report) covering activities during the previous year;

1.2 The delegation by the Authority of responsibilities for implementing and monitoring treasury management policies and practices and for the execution and administration of treasury management decisions.

1.3 Treasury management in this context is defined as:

1.4 "The management of the local authority's borrowing, investments, cash flows, its banking, money market and capital market transactions; the effective control of the risks associated with those activities; and the pursuit of optimum performance consistent with those risks."

1.5 The preparation of this report demonstrates that the Authority is implementing best practice in accordance with the code.

2. ECONOMICS UPDATE

2.1 The third quarter of 2023/24 saw:

- A 0.3% m/m decline in real GDP in October, potentially partly due to unseasonably wet weather, but also due to the ongoing drag from higher interest rates. Growth for the second quarter, ending 30th September, was revised downwards to -0.1% and growth on an annual basis was also revised downwards, to 0.3%;
- A sharp fall in wage growth, with the headline 3myy rate declining from 8.0% in September to 7.2% in October, although the ONS "experimental" rate of unemployment has remained low at 4.2%;

- CPI inflation continuing on its downward trajectory, from 8.7% in April to 4.6% in October, then again to 3.9% in November;
- Core CPI inflation decreasing from April and May's 31 years' high of 7.1% to 5.1% in November, the lowest rate since January 2022;
- The Bank of England holding rates at 5.25% in November and December;
- A steady fall in 10-year gilt yields as investors revised their interest rate expectations lower.

2.2 Further detail on the economy can be found within Appendix B of this report.

2.3 The revision of GDP data in Q2 to a 0.1% q/q fall may mean the mildest of mild recessions has begun. Indeed, real GDP in October fell 0.3% m/m which does suggest that the economy may stagnate again in Q3. The weakness in October may partly be due to the unseasonably wet weather. That said, as the weakness was broad based it may also be the case that the ongoing drag from higher interest rates is more than offsetting any boost from the rise in real wages.

2.4 However, the rise in the flash composite activity Purchasing Managers Index, from 50.7 in November to 51.7 in December, did increase the chances of the economy avoiding a contraction in Q3. The improvement was entirely driven by the increase in the services activity balance from 50.9 to 52.7. (Scores above 50 point to expansion in the economy, although only tepid in this instance.) The press release noted that this was primarily driven by a revival in consumer demand in the technological and financial services sectors. This chimes with the further improvement in the GfK measure of consumer confidence in December, from -24 to -22. The services PMI is now consistent with non-retail services output growing by 0.5% q/q in Q3, but this is in stark contrast to the manufacturing sector where the output balance slumped from 49.2 to 45.9 and, at face value, the output balance is consistent with a 1.5% q/q fall in manufacturing output in Q3.

2.5 The 0.3% m/m fall in retail sales volumes in October means that after contracting by 1.0% q/q (which was downwardly revised from -0.8% q/q) in Q2, retail activity remained weak at the start of Q3. That suggests higher interest rates are taking a bigger toll on real consumer spending.

2.6 Higher interest rates have filtered through the financial channels and weakened the housing market but, overall, it remains surprisingly resilient with only marginal falls showing year on year on the Halifax (-1%) and Nationwide (-1.8%) indices. However, the full weakness in real consumer spending and real business investment has yet to come as currently it is estimated that around two thirds to a half of the impact of higher interest rates on household interest payments has yet to be felt.

2.7 Overall, we expect real GDP growth to remain subdued throughout 2024 as the drag from higher interest rates is protracted but a fading of the cost-of-living crisis and interest rate cuts in the second half of 2024 will support a recovery in GDP growth in 2025.

2.8 The labour market remains tight by historical standards, but the sharp fall in wage growth seen in October will reinforce the growing belief in markets that interest rates will be cut mid-2024. Wage growth eased in October much faster than the consensus expected. Total earnings fell by 1.6% m/m, which meant the headline 3myy rate eased from 8.0% in September to 7.2% in October. This news will be welcomed by the Bank of England. Indeed, the timelier three-month annualised rate of average earnings growth fell from +2.4% to -1.2%. Excluding bonuses, it fell from 5.3% to 2.0%. Furthermore, one of the Bank's key barometers of inflation persistence, regular private sector pay growth, dropped from 7.9% 3myy to 7.3%, which leaves it comfortably on track to fall to 7.2% by December, as predicted by the Bank in November.

2.9 The fall in wage growth occurred despite labour demand being stronger in October than expected. The three-month change in employment eased only a touch from +52,000 in September to +50,000 in October. But resilient labour demand was offset by a further 63,000 rise in the supply of workers in the three months to October. That meant labour supply exceeded its pre-pandemic level for the first time, and the unemployment rate remained at 4.2% in October. In the three months to November, the number of job vacancies fell for the 17th month in a row, from around 959,000 in October to around 949,000. That has reduced the vacancy to unemployment ratio as demand for labour eases relative to supply, which may support a further easing in wage growth in the coming months.

2.10 CPI inflation fell from 6.7% in September to 4.6% in October, and then again to 3.9% in November. Both these falls were bigger than expected and there are clear signs of easing in domestic inflationary pressures. The fall in core CPI inflation from 5.7% to 5.1% in November was bigger than expected (consensus forecast 5.6%). That's the lowest rate since January 2022. Some of the decline in core inflation was due to the global influence of core goods inflation, which slowed from 4.3% to 3.3%. But some of it was due to services inflation falling from 6.6% to 6.3%. The Bank views the latter as a key barometer of the persistence of inflation and it came in further below the Bank's forecast of 6.9% in its November Monetary Policy Report. This will give the Bank more confidence that services inflation is now on a firmly downward path.

2.11 The Bank of England sprung no surprises with its December monetary policy committee (MPC) meeting, leaving interest rates at 5.25% for the third time in a row and pushing back against the prospect of near-term interest rate cuts. The Bank continued to sound hawkish, with the MPC maintaining its tightening bias saying that "further tightening in monetary policy would be required if there were evidence of more persistent inflationary pressures". And it stuck to the familiar script, saying that policy will be "sufficiently restrictive for sufficiently long" and that "monetary policy is likely to need to be restrictive for an extended period of time". In other words, the message is that the MPC is not yet willing to endorse investors' expectations that rates will be cut as soon as May 2024.

2.12 Looking ahead, our colleagues at Capital Economics forecast that the recent downward trends in CPI and core inflation will stall over the next few months before starting to decline more decisively again in February. That explains the view that the Bank of England won't feel comfortable cutting interest rates until H2 2024.

2.13 The fall in UK market interest rate expectations in December has driven most of the decline in 10-year gilt yields, which have fallen in line with 10-year US Treasury and euro-zone yields. 10-year gilt yields have fallen from 4.68% in October 2023 to around 3.70% at the time of writing, with further declines likely if the falling inflation story is maintained.

2.14 Investors' growing expectations that the Fed will cut interest rates soon has led to an improvement in risk sentiment, which has boosted the pound and other risky assets. In addition, the rise in the pound, from $1.21 in November to $1.27 now, has also been supported by the recent relative decline in UK wholesale gas prices.

2.15 The further fall in 10-year real gilt yields in December has supported the recent rise in the FTSE 100. That said, the index remains 5% below its record high in February. This modest rise in equities appears to have been mostly driven by strong performances in the industrials and rate-sensitive technology sectors. But UK equities have continued to underperform US and euro-zone equities. The FTSE 100 has risen by 2.2% in December, while the S&P 500 has risen by 3.8%. This is partly due to lower energy prices, which have been a relatively bigger drag on the FTSE 100, due to the index's high concentration of energy companies.

MPC meetings 2 November and 14 December 2023

2.16 On 2 November, the Bank of England's Monetary Policy Committee (MPC) voted to keep Bank Rate on hold at 5.25%, and on 14th December reiterated that view. Both increases reflected a split vote, the latter by 6 votes to 3, with the minority grouping voting for an increase of 0.25% as concerns about "sticky" inflation remained in place.

2.17 Nonetheless, with UK CPI inflation now at 3.9%, and core inflating beginning to moderate (5.1%), markets are voicing a view that rate cuts should begin in Q1 2024/25, some way ahead of the indications from MPC members. Of course, the data will be the ultimate determinant, so upcoming publications of employment, wages and inflation numbers will be of particular importance, and on-going volatility in Bank Rate expectations and the gilt yield curve can be expected.

2.18 In addition, what happens outside of the UK is also critical to movement in gilt yields. The US FOMC has kept short-term rates in the range of 5.25%-5.50%, whilst the ECB has moved its Deposit rate to a probable peak of 4%. Markets currently expect both central banks to start cutting rates in 2024.

3. INTEREST RATE FORECASTS

3.1 The Authority has appointed Link Group as its treasury advisors and part of their service is to assist the Authority to formulate a view on interest rates. The PWLB rate forecasts below are based on the Certainty Rate (the standard rate minus 20 bps) which has been accessible to most authorities since 1st November 2012.

3.2 The latest forecast on 7 November sets out a view that short, medium and long-dated interest rates will be elevated for some little while, as the Bank of England seeks to squeeze inflation out of the economy.

3.3 Our PWLB rate forecasts below are based on the Certainty Rate (the standard rate minus 20 bps, calculated as gilts plus 80bps) which has been accessible to most authorities since 1st November 2012.

3.4 Our current and previous PWLB rate forecasts below are based on the Certainty Rate.

Link Group Interest Rate View	07.11.23												
	Dec-23	Mar-24	Jun-24	Sep-24	Dec-24	Mar-25	Jun-25	Sep-25	Dec-25	Mar-26	Jun-26	Sep-26	Dec-26

4. TREASURY MANAGEMENT STRATEGY STATEMENT

Annual Investment Strategy

4.1 The Authority's Annual Investment Strategy, which is incorporated in the Treasury Management Strategy Statement (TMSS) was approved by the Authority on the 15 February 2023. It outlines the Authority's investment priorities as follows:

- Security of Capital
- Liquidity
- Yield

4.2 The Authority will aim to achieve the optimum return (yield) on its investments commensurate with proper levels of security and liquidity and with the Authority's risk appetite. In the current economic climate it is considered appropriate to keep investments short-term to cover cash flow needs, but also to seek out value available in periods up to 12 months with high credit rated financial institutions, using the Link suggested creditworthiness approach, including a minimum sovereign credit rating and Credit Default Swap (CDS) overlay information. (Amend if you use your own creditworthiness approach.)

Creditworthiness

4.3 Following the Government's fiscal event on 23rd September 2022, both S&P and Fitch placed the UK sovereign debt rating on Negative Outlook, reflecting a downside bias to the current ratings in light of expectations of weaker finances and a challenging economic outlook. Nothing further has evolved in the first half of 2023/24.

Benchmark	**Benchmark Return**	**Authority Performance**	**Investment interest to Quarter 3**
3 Month SONIA	5.19%	5.40%	£0.958m.

4.4 As illustrated above, the Authority outperformed the 3-month Sterling Overnight Index Average (SONIA) benchmark by 0.21bp. SONIA replaced LIBID at the end of December 2022 and has traded at a higher average rate than the previous LIBID benchmarks. Based on current market deposit rates on offer, it is currently anticipated that the actual investment return for the whole of 2023-24 will over recover the Authority's budgeted investment target of £0.525m by £1.183m. However, we have noticed some downward movement with interest rates offered at the moment, so this forecast is likely to be revised.

Borrowing Strategy

(a). Prudential Indicators:

4.5 It is a statutory duty for the Authority to determine and keep under review the "Affordable Borrowing Limits". The Authority's' approved Prudential Indicators (affordability limits) are outlined in the approved TMSS.

4.6 A full list of the approved limits (as amended) are included in the Financial Performance Report 2023-24, considered elsewhere on the agenda, which confirms that no breaches of the Prudential Indicators were made in the period to December 2023 and that there are no concerns that they will be breached during the financial year.

(b). Current external borrowing

4.7 The Authority has not taken any external loans since June 2012 and has been using cash resources to meet any capital expenditure. The amount of outstanding external borrowing as at 31 December 2023 was £24.217m, forecast to reduce to £23.771m by the end of the financial year as a result of standard loan repayments. All of this debt is at fixed rate with the remaining principal having an average rate of 4.25% and average life of 22.7 years.

(c). Loan Rescheduling

4.8 No debt rescheduling was undertaken during the quarter. Debt rescheduling opportunities have increased significantly in the current quarter where gilt yields, which underpin PWLB rates and market loans, have risen materially. Members will be advised if there is value to be had by rescheduling or repaying a part of the debt.

(d). New Borrowing

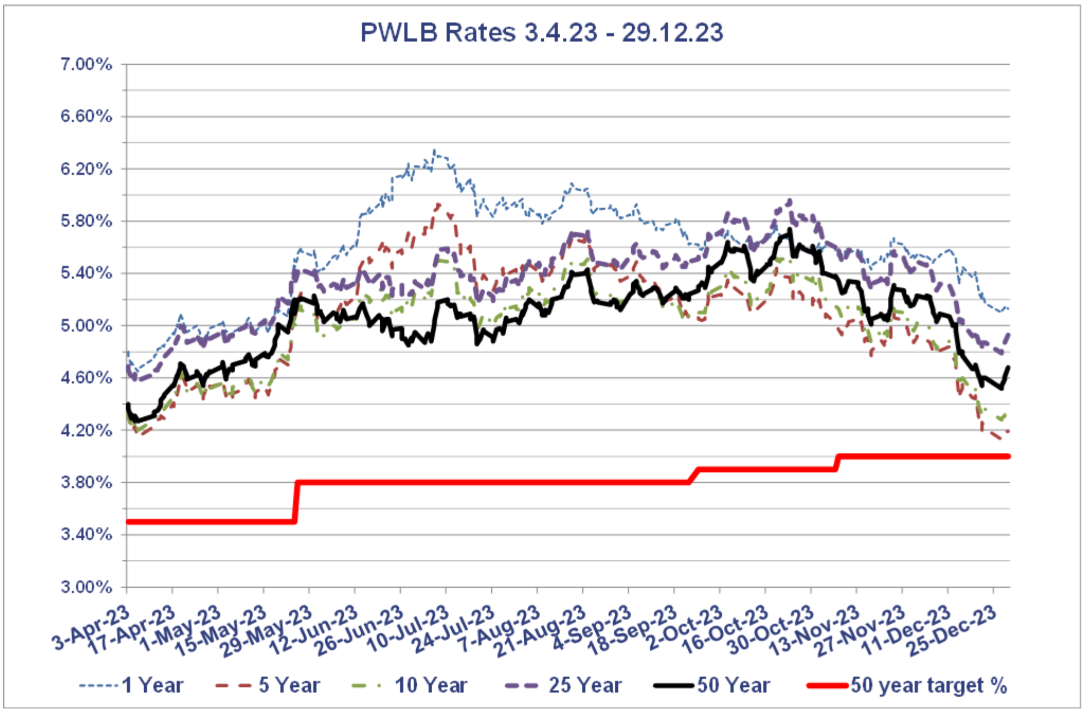
4.9 Gilt yields and PWLB rates were on a rising trend from April through to October but dropped back significantly in November and December.

4.10 The 50-year PWLB Certainty Rate target for new long-term borrowing started 2023/24 at 3.50% (the lowest forecast rate within a two-year time horizon), increasing to a peak of 4.00% in November. With rates elevated across the whole of the curve, it is advised to not borrow long-term unless the Authority wants certainty of rate and judges the cost to be affordable. (Please also note that from 15th June, HRA borrowing is 0.4% lower than the Certainty Rate.)

PWLB rates 2023/24 financial year to date (period ending 31 December 2023)

	1 Year	5 Year	10 Year	25 Year	50 Year
Low	4.65%	4.13%	4.20%	4.58%	4.27%
Date	06/04/2023	27/12/2023	06/04/2023	06/04/2023	05/04/2023
High	6.36%	5.93%	5.53%	5.96%	5.74%
Date	06/07/2023	07/07/2023	23/10/2023	23/10/2023	23/10/2023
Average	5.60%	5.09%	5.03%	5.35%	5.08%
Spread	1.71%	1.80%	1.33%	1.38%	1.47%

4.11 Borrowing rates for this quarter are shown below.



(e). Borrowing in Advance of Need

4.12 The Authority has not borrowed in advance of need during this quarter.

5. SUMMARY AND RECOMMENDATION

5.1 In compliance with the requirements of the Chartered Institute of Public Finance and Accountancy Code of Practice of Treasury Management, this report provides the Committee with the first quarter report on treasury management activities for 2023-24 to December 2023. As is indicated in this report, none of the Prudential Indicators have been breached, and a prudent approach has been taken in relation to investment decisions taken so far, with priority being given to liquidity and security over yield. Whilst investment returns are high as a result of the increase in interest rates, the Authority is still anticipating that investment returns will meet the budgeted target, as rates were forecast to rise when the budget was set.

SHAYNE SCOTT
Director of Finance and Corporate Services (Treasurer)

APPENDIX B TO REPORT RC/24/5

A detailed update on the economy for Quarter 3 2023/24

- The revision of GDP data in Q2 to a 0.1% q/q fall may mean the mildest of mild recessions has begun. Indeed, real GDP in October fell 0.3% m/m which does suggest that the economy may stagnate again in Q3. The weakness in October may partly be due to the unseasonably wet weather. That said, as the weakness was broad based it may also be the case that the ongoing drag from higher interest rates is more than offsetting any boost from the rise in real wages.
- However, the rise in the flash composite activity Purchasing Managers Index, from 50.7 in November to 51.7 in December, did increase the chances of the economy avoiding a contraction in Q3. The improvement was entirely driven by the increase in the services activity balance from 50.9 to 52.7. (Scores above 50 point to expansion in the economy, although only tepid in this instance.) The press release noted that this was primarily driven by a revival in consumer demand in the technological and financial services sectors. This chimes with the further improvement in the GfK measure of consumer confidence in December, from -24 to -22. The services PMI is now consistent with non-retail services output growing by 0.5% q/q in Q3, but this is in stark contrast to the manufacturing sector where the output balance slumped from 49.2 to 45.9 and, at face value, the output balance is consistent with a 1.5% q/q fall in manufacturing output in Q3.
- The 0.3% m/m fall in retail sales volumes in October means that after contracting by 1.0% q/q (which was downwardly revised from -0.8% q/q) in Q2, retail activity remained weak at the start of Q3. That suggests higher interest rates are taking a bigger toll on real consumer spending.
- Higher interest rates have filtered through the financial channels and weakened the housing market but, overall, it remains surprisingly resilient with only marginal falls showing year on year on the Halifax (-1%) and Nationwide (-1.8%) indices. However, the full weakness in real consumer spending and real business investment has yet to come as currently it is estimated that around two thirds to a half of the impact of higher interest rates on household interest payments has yet to be felt.
- Overall, we expect real GDP growth to remain subdued throughout 2024 as the drag from higher interest rates is protracted but a fading of the cost-of-living crisis and interest rate cuts in the second half of 2024 will support a recovery in GDP growth in 2025.
- The labour market remains tight by historical standards, but the sharp fall in wage growth seen in October will reinforce the growing belief in markets that interest rates will be cut mid-2024. Wage growth eased in October much faster than the consensus expected. Total earnings fell by 1.6% m/m, which meant the headline 3myy rate eased from 8.0% in September to 7.2% in October. This news will be welcomed by the Bank of England. Indeed, the timelier three-month annualised rate of average earnings growth fell from +2.4% to -1.2%.

Excluding bonuses, it fell from 5.3% to 2.0%. Furthermore, one of the Bank's key barometers of inflation persistence, regular private sector pay growth, dropped from 7.9% 3myy to 7.3%, which leaves it comfortably on track to fall to 7.2% by December, as predicted by the Bank in November.

- The fall in wage growth occurred despite labour demand being stronger in October than expected. The three-month change in employment eased only a touch from +52,000 in September to +50,000 in October. But resilient labour demand was offset by a further 63,000 rise in the supply of workers in the three months to October. That meant labour supply exceeded its pre-pandemic level for the first time, and the unemployment rate remained at 4.2% in October. In the three months to November, the number of job vacancies fell for the 17th month in a row, from around 959,000 in October to around 949,000. That has reduced the vacancy to unemployment ratio as demand for labour eases relative to supply, which may support a further easing in wage growth in the coming months.
- CPI inflation fell from 6.7% in September to 4.6% in October, and then again to 3.9% in November. Both these falls were bigger than expected and there are clear signs of easing in domestic inflationary pressures. The fall in core CPI inflation from 5.7% to 5.1% in November was bigger than expected (consensus forecast 5.6%). That's the lowest rate since January 2022. Some of the decline in core inflation was due to the global influence of core goods inflation, which slowed from 4.3% to 3.3%. But some of it was due to services inflation falling from 6.6% to 6.3%. The Bank views the latter as a key barometer of the persistence of inflation and it came in further below the Bank's forecast of 6.9% in its November Monetary Policy Report. This will give the Bank more confidence that services inflation is now on a firmly downward path.
- The Bank of England sprung no surprises with its December monetary policy committee (MPC) meeting, leaving interest rates at 5.25% for the third time in a row and pushing back against the prospect of near-term interest rate cuts. The Bank continued to sound hawkish, with the MPC maintaining its tightening bias saying that "further tightening in monetary policy would be required if there were evidence of more persistent inflationary pressures". And it stuck to the familiar script, saying that policy will be "sufficiently restrictive for sufficiently long" and that "monetary policy is likely to need to be restrictive for an extended period of time". In other words, the message is that the MPC is not yet willing to endorse investors' expectations that rates will be cut as soon as May 2024.
- Looking ahead, our colleagues at Capital Economics forecast that the recent downward trends in CPI and core inflation will stall over the next few months before starting to decline more decisively again in February. That explains the view that the Bank of England won't feel comfortable cutting interest rates until H2 2024.
- The fall in UK market interest rate expectations in December has driven most of the decline in 10-year gilt yields, which have fallen in line with 10-year US Treasury and euro-zone yields. 10-year gilt yields have fallen from 4.68% in October 2023 to around 3.70% at the time of writing, with further declines likely if the falling inflation story is maintained.

- Investors' growing expectations that the Fed will cut interest rates soon has led to an improvement in risk sentiment, which has boosted the pound and other risky assets. In addition, the rise in the pound, from $1.21 in November to $1.27 now, has also been supported by the recent relative decline in UK wholesale gas prices.
- The further fall in 10-year real gilt yields in December has supported the recent rise in the FTSE 100. That said, the index remains 5% below its record high in February. This modest rise in equities appears to have been mostly driven by strong performances in the industrials and rate-sensitive technology sectors. But UK equities have continued to underperform US and euro-zone equities. The FTSE 100 has risen by 2.2% in December, while the S&P 500 has risen by 3.8%. This is partly due to lower energy prices, which have been a relatively bigger drag on the FTSE 100, due to the index's high concentration of energy companies.

MPC meetings 2 November and 14 December 2023

- On 2nd November, the Bank of England's Monetary Policy Committee (MPC) voted to keep Bank Rate on hold at 5.25%, and on 14th December reiterated that view. Both increases reflected a split vote, the latter by 6 votes to 3, with the minority grouping voting for an increase of 0.25% as concerns about "sticky" inflation remained in place.
- Nonetheless, with UK CPI inflation now at 3.9%, and core inflating beginning to moderate (5.1%), markets are voicing a view that rate cuts should begin in Q1 2024/25, some way ahead of the indications from MPC members. Of course, the data will be the ultimate determinant, so upcoming publications of employment, wages and inflation numbers will be of particular importance, and on-going volatility in Bank Rate expectations and the gilt yield curve can be expected.
- In addition, what happens outside of the UK is also critical to movement in gilt yields. The US FOMC has kept short-term rates in the range of 5.25%-5.50%, whilst the ECB has moved its Deposit rate to a probable peak of 4%. Markets currently expect both central banks to start cutting rates in 2024.
